

Livestock Loading Chutes

16 Foot Stationary Cattle Loading Chute

888-439-6788

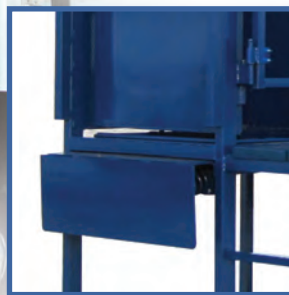

*A loading chute design
that pleases farmers
and truck drivers*

Te Slaa loading chutes are constructed from sturdy 2" x 3" and 2" x 2" heavy wall, square and rectangular tubing. We offer 3 types of ramp flooring: 2" x 12" green treated lumber, 1/4" tread plate steel floor, or 2" x 8" rumbar floor.

The main gate at the top keeps loaded livestock from running back off the trailer while the secondary gate closes the opening at the side.

A spring loaded bumper softens the stop and bridges the space between the chute and the trailer.

A wide catwalk furnishes plenty of space for a stable work area.
